> Technical Skills

- MERN Stack
- Javascript ES6 , jQuery , React.js
- Node.js , Express.js
- mySQL , mongoDB
- Git Source Control , Github , Heroku

Jon Anthony Macrohon

Software Developer

Summary

Javascript Software Developer leveraging a background in nursing to problem solve projects in a timely manner. Recently attained a certificate at Monash University Full Stack Flex Coding Bootcamp, with newly developed skills focused in MERN Stack. Developed a passion for creating applications focusing on interactive user experience, through a mobile-first approach. Pursuit with each project is to best engage the target audience, thereby creating impactful and relevant user-experiences. Previously worked in a team of four to develop an HR / Roster application implementing React.js for dynamic front-end and mongoDB for database storage. Excited to incorporate existing skills with new technical ability in web developement as part of a fast-paced, quality-driven team in order to build better experiences on the web.

Projects

ReadMe

https://github.com/Jmacr0/project_one/
https://jmacr0.github.io/project_one/

ReadMe is a book search application that implements GoogleBooksAPI. The user is able to search by keyword, author, book title, and genre. I was the leader for this project and responsible for the front end user interface, along with the jQuery and aJax request. I would oversee the work done by other team members and assist with integrating the components together.

Technologies | Javascript, jQuery, aJax, local storage, bulma.io

Education

SEP 2019 - MAR 2020 | Monash University
Full Stack Flex Coding Bootcamp Certificate

FEB 2012 - DEC 2014 | University of Auckland
Bachelor of Nursing
